

## Case study: id law partners choose hosted Zimbra Collaboration Suite

id law partners is a Barcelona law firm. They wanted to have access to email, shared calendars and contacts not just from the office, but from anywhere with an internet connection, including mobile devices. Corporate identity was important (mail addresses @id-lawpartners.com) as was the ability to create mailing lists and groups. Finally, id law partners needed good support and backups, so even if an email were accidentally deleted from the server it could be recovered.

### id law partners

id law partners looked at various solutions, including Microsoft Small Business Server and hosted Microsoft Exchange before deciding that hosted Zimbra from Axiom Tech offered the best value for money. Zimbra is one of Axiom's "Software as a Service" offerings. Axiom Tech takes care of the servers, setup, upgrades, support and backups – our customers just get on and use it.

*"Zimbra with Axiom Tech provides us with headache free advanced and flexible email, calendar and contacts management services, with excellent support and no set-up costs. Axiom Tech has responded quickly to all our requests (backups, logs, debugging) and migration to Zimbra 5.0 was seamless."*
